## Maracc marks production start for world-class well intervention rig

Maracc is currently building the GM4000, a purpose built semi-submersible rig tailored for promising business opportunities related to sub-sea energy developments.

The inaugural steel strike ceremony was held at the Zhousan shipyard in China on August 8th 2007, where Asle Solheim – Maracc's CEO – officially initiated the production process. The rig is due to be delivered in January 2010.
